Parking lot USB exercise

Contents	The USB drive contained several files that pose a threat including Vacation Ideas, information on Jorge's wedding, his resume, shift schedules, family and pet photos, and employee budget information.
Attacker mindset	The information on the wedding could be of great use in social engineering tactics targeting Jorge, or his fiance. Used in conjunction with his resume, you could use the information to attempt to convince him that you've crossed paths before and might be able to get more information from him. The vacation ideas he's documented may be a resource you can use for conversation in social engineering attacks as well.
Risk analysis	Educating employees about the risks and possible attacks that can be used through a compromised USB drive, keeping virus scanners up to date and scanning at regular intervals. Helping employees protect themselves from phishing attacks, teaching them about proper ways to handle sensitive data, and the proper way of handling an unfamiliar USB drive.
